Section 1

Executive summary

Executive summary

Key numbers at a glance

Metric	Value
Total customers on record	2,273
Active sales representatives	31
Geographic locations covered	20+

Top 3 reps by customer count:

- 1 Customer Office — 341 customers (administrative allocation)
- 2 **Ian** — 232 customers across 31 locations (widest geographic spread)
- 3 **Peter** — 209 customers across 22 locations (heavily concentrated)

Key findings

- **Geographic concentration:** Over 31% of all customers are in Ibadan/Oyo alone.
- **Ian** has the widest territorial spread but moderate concentration — his top 3 locations hold ~54% of his portfolio.
- **Peter** is heavily concentrated — Ibadan/Oyo alone holds **55%** of his customers.
- Ian and Peter share **7 locations**, but actual competitive overlap is minimal — in each shared location, one rep dominates.
- **Data quality:** 9.5% of customer records lack a street address; 4.9% are missing phone numbers.

Section 2

Data overview

Data source & scope

Source: Company customer database export (Excel)

Scope: All customers mapped to their assigned sales representatives.

Raw data: 2,604 rows $\times$ 11 columns (all character type)

After cleaning: 2,273 rows $\times$ 7 columns

Cleaning steps applied:

- Removed header/metadata rows (company name, timestamp, report title)
- Dropped near-empty columns (Address Line 2, State, Fax Number — ~100% missing)
- Standardised sales rep names to consistent casing
- Grouped cities/counties into cleaner location labels
- Converted Customer Number and Sales Rep Number to numeric

Data quality summary

Column	Missing count	Missing %
Street Address	247	9.5%
Phone Number	127	4.9%
City/County	126	4.8%
Sales Rep Number	11	0.4%
Customer Number	6	0.2%
Customer Name	0	0.0%

Recommendation: Prioritise filling in missing street addresses and phone numbers to improve customer reachability and delivery accuracy.

Section 3

Customer distribution by location

Top 20 customer locations

Location analysis — Key takeaways

- **Ibadan/Oyo dominates** with 711 customers (31% of all customers) — both an opportunity and a concentration risk.
- **Top 5 locations** (Ibadan/Oyo, Ogun, Lagos, Kaduna, Ilorin/Kwara) account for roughly **62%** of all customers.
- Southern Nigeria is heavily represented; northern presence is limited mainly to Kaduna and Kano.

Implications for leadership:

- Revenue is geographically concentrated — disruptions in Ibadan/Oyo would disproportionately affect the business.
- There may be untapped growth opportunities in under-represented regions (e.g., Abuja/FCT, northern states).

Section 4

Sales rep performance

Sales reps ranked by customer count (Top 15)

Sales rep performance — Key takeaways

- **Customer Office** (341 customers) is an administrative allocation, not a single sales rep.
- **Ian (232) and Peter (209)** are the top two individual performers by customer count.
- There is a steep drop-off after the top 5 reps: the **top 5 account for a disproportionate share** of the customer base.
- **11 reps have fewer than 30 customers each** — these may be newer hires, part-time, or underperforming.

Recommendations:

- Investigate why Customer Office holds so many accounts — consider redistributing to named reps.
- Review workload balance: top reps may be stretched too thin while others are underutilised.

Section 5

Deep dive: Ian

Ian's customer distribution by location

Ian — Analysis & risk assessment

Strengths:

- Widest geographic coverage of any rep — **31 locations**.
- No single location exceeds 22% of his portfolio.
- Strong presence across the South-East and South-South (Enugu, Delta, Rivers, Edo).

Risks:

- His top 3 locations (Enugu, Delta, Rivers/PH) hold ~54% of his customers — moderate concentration.
- Managing 31 locations may strain his ability to service all customers effectively.
- If Ian were to leave, the company would lose coverage in numerous locations simultaneously.

Recommendations:

- Develop a succession plan for Ian's territory.
- Consider assigning a junior rep to shadow Ian in his top locations.
- Monitor customer satisfaction in Ian's lower-volume locations.

Section 6

Deep dive: Peter

Peter's customer distribution by location

Peter — Analysis & risk assessment

Strengths:

- Second-highest individual customer count (209).
- Dominant presence in the company's largest market — Ibadan/Oyo.

Critical risk — Geographic concentration:

- **55% of Peter's customers** are in Ibadan/Oyo alone.
- His top 2 locations (Ibadan/Oyo + Ogun) account for **72%** of his portfolio.
- If Peter loses access to Ibadan/Oyo (e.g., he relocates, becomes ill, or resigns), 115 customers are immediately at risk.

Recommendations:

- **Urgent:** Assign a backup rep for Ibadan/Oyo to reduce single-person dependency.
- Gradually redistribute some Ibadan/Oyo accounts to reduce Peter's concentration.
- Encourage Peter to develop his presence in less-saturated markets.

Section 7

Ian vs Peter comparison

Side-by-side: Top 10 locations

Comparison summary

Metric	Ian	Peter
Total customers	232	209
Locations covered	31	22
Top location share	22% (Enugu)	55% (Ibadan/Oyo)
Top 3 locations share	~54%	~81%

Key contrast: Ian is a *spread* rep — wide coverage, moderate concentration. Peter is a *depth* rep — deep penetration in fewer markets. Both strategies have merit, but Peter's concentration poses higher business continuity risk.

Overlap analysis

Ian and Peter share **7 locations** out of 46 unique locations combined.

Table 1: Shared locations between Ian and Peter

Location	Ian (n)	Ian (%)	Peter (n)	Peter (%)
Enugu	51	22.0	3	1.4
Delta State	39	16.8	1	0.5
Ogun State	1	0.4	35	16.7
Edo / Benin	25	10.8	1	0.5
Anambra State	11	4.7	1	0.5
Benue State	1	0.4	1	0.5
Uyo	1	0.4	1	0.5

- 55.6% of Ian's customers and 20.6% of Peter's customers fall in shared locations.
- **However, actual competitive overlap is minimal** — in each shared location, one rep dominates while the other has only 1–3 customers.
- No immediate need to reassign territories based on overlap alone.

Section 8

Risk assessment & recommendations

Concentration risk summary

Risk factor	Severity	Affected customers
Peter's Ibadan/Oyo concentration	HIGH	115
Company-wide Ibadan/Oyo dependence	HIGH	711
Ian's broad but thin coverage	MEDIUM	232
Customer Office unassigned accounts	MEDIUM	341
Data quality gaps (addresses, phones)	MEDIUM	247+ records
Bottom 11 reps with <30 customers	LOW	<330 combined

Recommendations for leadership

Immediate actions (0–3 months):

- 1 Assign a backup rep for **Peter's Ibadan/Oyo territory** to mitigate single-person dependency.
- 2 Audit the **341 Customer Office accounts** — redistribute to named sales reps.
- 3 Launch a **data cleanup initiative** to fill missing addresses and phone numbers.

Medium-term actions (3–6 months):

- 4 Develop a **succession plan for Ian** — his 31-location coverage is a key-person risk.
- 5 **Rebalance workloads** — top reps are overloaded while others are underutilised.
- 6 Evaluate underperforming reps (fewer than 30 customers) for coaching or reassignment.

Strategic actions (6–12 months):

- 7 Explore **geographic expansion** into under-served northern regions.
- 8 Implement a **CRM system** for better territory management and reporting.

Thank you
